DATA

MODEL & FIT

formula syntax

x, y contained
in data frame

- *simple input*

non-formula syntax

x, y as vector/
matrices

- *more options to fit
complex models*

refit EM
using
`iprior()`

`iprior()`

`iprior()`
`ipriorOptim()`
`fbmOptim()`

```
ipriorMod
object
```

extract
`ipriorMod$ipriorKernel`

`kernL()`

```
ipriorKernel
object
```

Parameter
estimates only

direct optimisation,
e.g. `optim()`
